

Gearbox **RDG/RDGL Series**

**QUALITY
MADE IN
GERMANY**

RDG/RDGL Series

- RDG: **REINTJES Dredging Gearbox**, reduction gearbox to drive dredger pumps
- RDGL: **REINTJES Dredging Gearbox**, reduction gearbox to drive dredger pumps with disc clutch (German: mit **Lamellenkupplung**)

Customer Benefits

Gearboxes of the RDG/RDGL series have been especially designed for dredger applications such as dredging pumps installed inside the vessel as well as dredge pumps in use under water with closed coupled pump and engine.

We have over 80 years of experience in marine gearbox design and production and use state-of-the-art computation tools and production technologies. Owing to their design for specific areas of deployment, the reduction gearboxes with or without clutch of the RDG series offer various special advantages:

- High operating reliability and robustness
- Simple operation and maintenance
- Compact dimensions
- Proven REINTJES clutch design
- Propulsion gearbox and dredging gearbox from one supplier

Options

- Output shaft with trapezoidal thread
- Slide bearings
- Flexible coupling
- Mechanical overload protection
- Electronic overload protection for gearboxes with built-in clutch
- Horizontal offset (1)
- Turn drive mech./elect.
- SAE Bell housing for diesel engine connection (2)
- For gearboxes with trapezoidal thread: custom made pump adapter housing
